Lasernet Module Is not Visible

Alice Petruzzella - 2024-07-02 - Comments (0) - Lasernet FO Connector FAQs

Lasernet for Dynamics 365

Issue

After installing Lasernet Connector 6.21, the Lasernet module might not be visible in the Navigation pane if you have either a new installation or a new legal entity to set up.

This occurs if no valid license key has been entered.

Solutions

To solve this issue, implement either of these solutions:

- Add **&mi=LACParameters** at the end of the URL. For example: [https://environmentdevaos.axcloud.dynamics.com/?cmp=usp2**&mi=LACParameters**](https://environmentdevaos.axcloud.dynamics.com/?cmp=usp2&mi=LACParameters)

or

- Search for **Parameters** (**Lasernet** > **Setup**) and enter a valid **License code**.

Either approach opens the **Lasernet parameters** page, where a valid **License code** is required.

ⓧ The Starter version of Lasernet only allows 3 active reports. Report printing processes are slowed down
