

Why do overlays printed to Lاسernet Print Capture not get imported?

Nicole Ojeda - 2021-03-26 - Comments (0) - Lاسernet FAQs

Lاسernet

When the latest version of Lاسernet is installed, it overwrites the preexisting Print Capture printer. If you require an overlay for an older version, follow these steps:

1. Open **Services** and stop the **Print Capture** service.
2. Open a command prompt to navigate to the Lاسernet install directory (for the required version) and run:

```
lprintcapture.exe -debug
```

3. Print the required files to the Print Capture printer and then close the command prompt window.
