Azure Service Bus Configuration Update Required Before Microsoft SDK Retirement

2026-09-08 - Nicole Ojeda - [Comment \(1\)](#) - [Lasernet FO Connector News](#)

Microsoft is retiring older Azure Service Bus SDK components on 30 September 2026. Customers using the Lasernet Connector for Dynamics 365 Finance and Operations should review and apply any required configuration updates before this date to avoid service disruption.

Action Required

Please review the Knowledge Base article and follow the applicable instructions before 30 September 2026:

If I get it right this This applies exclusively to configurations using the "Cloud print connector"? That's what the linked article is telling me. Is that right? What about the "Lasernet Printer Service"? Is this affected too? Thank you very much for confirmation or further information. Kind regards Stephan
