Input management running with ABBYY version 3.0 and 3.5

2021-06-30 - Alex Clemons - Comments (0) - Lasernet News

Lasernet

Customers running on ABBYY version 3.0 and 3.5 should make it a priority to upgrade to the latest version of Input Management. This is because ABBYY version 3.0 and 3.5 are no longer supported.

The ABBYY version 3.0 and 3.5 licenses can no longer be reactivated when moving to another server.

Tesseract OCR

A new built-in OCR (Optical Character Recognition) module optimized for Lasernet Input Management, for text recognition in images, scanned documents and images embedded in original PDF documents. Improved compared to previous bundled 3rd party applications, by having support for multi-threading processing and retaining the original text from incoming PDF documents.

Key Benefits

- Improved workflow with built-in server module
- Faster OCR processing with multi-thread support
- Keep text in original PDF document to improve quality of extracted text and values for incoming documents
- Easier deployment on new or existing servers
