SharePoint Connection Updated for Lasernet FO Connector 10.0.32 PU56 - LAC Upgrade Required

2023-03-29 - Alex Clemons - Comments (0) - Lasernet FO Connector News

If you validate for the SharePoint connection on a Lasernet Connector version prior to 6.18.3 and are on 10.0.32 PU56 or higher, you will receive the following exception:

Error

```
Method not found: 'Void
Microsoft.Dynamics.Platform.Integration.SharePoint.RestProxyBase.AddAuthentication(Sys
tem.Net.HttpWebRequest)'.

{"error_description":"ID3035: The request was not valid or is malformed."}
```

The DLL Microsoft.Dynamics.Platform.Integration.SharePoint was updated as part of version 10.0.32 PU56.

One of the changes made by Microsoft is the input parameter for the function AddAuthentication in RestProxyBase (SharePointProxy) from **HttpWebRequest** to **IHttpExecutorRequest**.

```
protected virtual void AddAuthentication(HttpWebRequest request)
{
    if (request != null && !string.IsNullOrEmpty(this.AccessToken))
    {
        request.Headers.Add("Authorization", string.Concat("Bearer ", this.AccessToken));
    }
}
```

```
protected virtual void AddAuthentication(IHttpExecutorRequest request)
{
    if (request != null && !string.IsNullOrEmpty(this.AccessToken))
    {
        request.Headers.Add("Authorization", string.Concat("Bearer ", this.AccessToken));
    }
}
```

Solution

Dynamics 365 Finance & Operations users on version 10.0.32 PU56 or later, who are using SharePoint with the Lasernet Connector, please upgrade to Lasernet Connector version 6.18.3.
