Upcoming Release: Lasernet FO Connector 7.3.1

2026-07-28 - Nicole Ojeda - [Comments \(0\)](#) - [Lasernet FO Connector News](#)

Following the release of Lasernet Connector for Dynamics 365 Finance & Operations (FO) version 7.3, we have been working closely with partners and customers to review feedback and address issues identified after release.

Version 7.3 represents one of the most significant FO Connector releases to date, introducing important platform improvements and enhanced support for e-invoicing capabilities. As part of our ongoing commitment to product quality, we are currently preparing version 7.3.1, which will include a number of fixes, enhancements, and usability improvements across the FO Connector.

Version 7.3.1 is currently expected to be available in August 2026 for Dynamics 365 FO Update 71, Update 72, and the preview version of Update 73.

Recommendation for Customers

Customers planning an upgrade to version 7.3 should ensure appropriate testing is completed in a non-production environment before deployment.

If your implementation timeline allows, consider waiting for version 7.3.1, which will include a number of corrections and improvements identified through partner and customer feedback.

The items below represent the current planned scope for version 7.3.1 and may change before release.

Bug Fixes and Enhancements – FO Connector 7.3.1

Case Number	Area	Description	Ticket Number
74175@LAC365FO	Autoform DM / Keep 11	Keep documents: Replace "Show" button with "Download".	
74174@LAC365FO	Query Range	FO 7.3: Query range ignored on top-level table causing full journal data retrieval.	#50057
74146@LAC365FO	Form Links	Form link parameter values are not fetched.	#50047
74142@LAC365FO	CE	Re-add better support for displaying PDFs instead of downloading them in Dataverse/Dynamics 365.
